

DISCOVER THE ROAD TO HAPPINESS WITH HITACHI'S NEW SATNAV PLAYERS

November 2006: Stopping and asking for directions will be, quite literally a thing of the past.

The Hitachi MMP-501 & MMP401 GPS car navigator makes finding your way quick, easy, and most importantly, stress-free. Simply enter your destination and the internal GPS receiver in these small but technology-packed device plots your whereabouts and your optimum route. The directions and your present location is constantly pinpointed and displayed with crystal clarity on the extra-wide 5" & 4" anti-glare LCD touch-screen while the automated voice-prompts will instruct you when and where to turn.

However, the Hitachi MMP-501 & MMP-401 GPS are much more than just an electronic car navigation system. They also play MP3 & MP4 audio/video files from their 256MB SDRAM which you can transfer via the USB connection or SD card.

You'll be able to enjoy the benefit of hands-free calls with the MMP-501, when used in conjunction with your Bluetooth compatible mobile phone. You can also plug-in an external device like a portable DVD or MP3 player via the unit's AV connection. The MMP-501 & the MMP-401's built-in lithium battery provide a 3-hour stand-alone operating time or they can be connected to a car adaptor.

So, say goodbye to arguments over maps, the Hitachi MMP-501 & MMP-401 GPS systems makes car navigation enjoyable and accessible.

Find out more at <http://aus.hitachi.com.au> or call 1800 448 224.
